

Question-1

It keeps only the rows where sales amount is higher than 1000

Question-3

ALL- removes all filters from the entire Sales table. Ignores every column filter

ALLEXCEPT – removes all filters except the filter on the Region column

Question-5

ALLSELECTED- is almost the same as **ALLEXCEPT** which removes filters, but respect the ones applied through visuals or slicers

Question-10

ALLSELECTED is designed to respect **user selections** (like slicers), but **remove filters from the inner visual (like rows/columns in a matrix)**.

However, in **pivot tables (matrix visuals)**, the way context is built can cause **ALLSELECTED** to act differently than expected — especially when:
